How to Build Your Paper Village

1. **Print**
   Print at 100% (Actual size) on white cardstock, 65-110 lb. Check the 1-inch square with a ruler.

2. **Score**
   Run a dry ballpoint pen or a butter knife along every dashed line, using a ruler. Clean folds make neat corners.

3. **Cut**
   Cut on the solid lines only. Do not cut the dashed lines between the walls.

4. **Fold**
   Fold every dashed line away from you, so the printed side stays on the outside.

5. **Glue the walls**
   Put glue on the 'glue' tab and press it inside the edge of the front wall. Hold for 30 seconds.

6. **Add the base**
   Fold the bottom flaps in, add glue under them and stand the house on the light outline of the base card.

7. **Add the roof**
   Fold the roof on the ridge, glue the top edges of the gables and set the roof on, with the same overhang at both ends.

8. **Light it up**
   Cut out the windows with a craft knife (adults only) and add a battery tealight. Never use a real candle.

Tip: arrange the houses on a tray with cotton-wool snow, fake moss and the stand-up trees.
